Hallo,

as briefly described during meeting in Brunswick the latest version of rollingstock scheme is 0.93 with the major addition of train related data in <formation> branch. However, it is still possible to discuss the best "mounting point" of this branch:

1. railml --- rollingstock --- rs <= vehicle related

 |
 -- formations --- formation <= train related

or

2. railml --- rollingstock --- rs <= vehicle related

 |
 -- formation <= train related

Please give me your opinions.

Best,
Joerg von Lingen
