Dear all,

this topic has been posted in the forum in order to obtain feedback from the community. However, there has been no feedback so far. Please provide this feedback as the next steps for an implementation in railML 2.4 would need to take place within the next two weeks.
Please let us know if
1. you prefer a specific scenario for your use case and why
2. both scenarios would work for your use cases
3. this does not apply for your use cases and you have no preferences

Best regards,

Philip Wobst
