
Subject: [railML3.1|Simple Example] namespace clashes
Posted by [Felix Prüter](#) on Fri, 06 Jul 2018 12:18:04 GMT

Dear all,
when I tried to validate the railML Simple Example for railML v3.1 with XMLSpy I got an error stating that the default namespace of the xml itself does not match the target namespace of the referenced schema.
The mismatch is in particular: 3.1 vs v3-1 in the relevant namespace urls.
I fixed it manually for now but it should be fixed in the file for future releases.

Kind regards
