Dear all,

Unfortunately I have only now noticed during the review of the wiki pages for the <state> element that there is a new "state" attribute in railML2.4 that de facto replaces or extends the previous "disabled" attribute. The question for me is how to deal with the old "disabled" attribute. It's certainly too late to declare it "deprecated with version 2.4" now. Therefore, I would suggest at least to document in the wiki that "disabled" and "state" must not have any contradictions. If possible, only one of the two attributes should be used at a time.

Kind regards

Christian Rößiger
