Dear Jörg,

I have a strong preference for using only the <isLimitedBy>s to define the area. This is also the current approach of the Norwegian sector in railML2.4nor. I find that the <trackAssetInRA>s and similarly the <tvdSection>/<relatedToTrack>s are redundant. The latter is also required (one or more). There can easily be a very large number of assets within an RA, resulting in a large number of such references. Through the topology and positioning systems these assets are easily identifiable without direct references.
