Dear all,

we discussed the issue of <relatedToTrack>s in TVD section today.

1) The element shall be optional not mandatory.

2) It was introduced to allow finding the neighbour TVD section in case of sections with gap as described by Norwegians.

Means there may be cases where (especially) track circuits without explicit insulated rail joints (IRJ) are not joining

or overlapping. As long as we cannot exclude such cases of gaps I would rather keep the possible references to underlaying track.

Regards,

Jörg von Lingen - Interlocking coordinator
