
Subject: How to represent Line Continuation on railML

Dear all,

if I want to export in railML 3.1 the schematic of a station that has several "real" bufferstops, and also some "fake" bufferstops representing the line borders (see image below), how can I export the fake ones?

I need to export them because they define the borders of the tvdSection for the interlocking schema.

Any ideas?

Thanks in advance,
f.
