Hi,

I am afraid postponing it to 2.6 would not be soon enough for some members of the timetable community. Since passenger information is a major point of the timetable 2.5 changes I think it would make sense to include that too in order too keep things together.

Regarding the questions above:

Quote:

- * Will information areas also needed for other infrastructure elements, e.g. level crossings or bridges or tunnels?
- * naming: To make it more precise, how about <passengerInformationArea>?
- * Is there any linking with other types of areas, e.g. track-related areas?

We will need those information areas also for tracks and platformEdges. I have created a branch where those changes could be reviewed already in the repository:

<https://svn.railml.org/railML2/branches/passengerInfo.infras tructure/schema/>

Other infrastructure elements havent been requested so far.

Regarding the naming I think your proposal would be fine and a bit more clear. Let me know if I should include that change in the branch above.

Regarding linking, Im not aware of such links. Dont think this is an issue.

Best regards, Milan
