Dear all,

almost one year ago I presented a proposal for a re-modelling of the visualization model. So far, I have not received any feedback from the community. Does this mean that there is no interest in changing the visualization model? In that case I suggest to keep the visualization model as realized in the railML 3.2 beta2, which looks like in the attached picture [1].

If you are interested in modifying the visualization model with upcoming railML 3.2, please let us know here in the forum.

Thank you very much and best regards  
Christian
