---

Dear all,

within the ETCS use case working group we discussed about adding a designator child element for the topology base element <netElement> (see [1]). So far, a <designator> is only available for all elements within <functionalInfrastructure>, e.g. balises, levelCrossings etc.

The requirement has already been filed in railML development Git system [2].

Please communicate your additional requirements and needs for a <designator> child element in <netElement> here in the forum.

[2] <https://development.railml.org/railml/version3/-/issues/476>

Thank you very much and best regards

Christian
