Dear all,

with the new type attribute in <derailerIS> I would prefer the solution with one object <derailerIS> and one object <derailerIL>.

```
<!—infrastructure layer -->
<infrastructure>
....
 <derailerIS id="dris01" type="doubleDerailer">
  <spotLocation .../>
  <spotLocation .../>
 </derailerIS>
....
</infrastructure>

<!—Interlocking layer - ->
<interlocking>
....
 <derailerIL id="dril01">
  <refersTo ref=dris01"/>
  <lockedTrack ref="trk231"/>
  <lockedTrack ref="trk232"/>
 </derailerIL>
....
</interlocking>
```

Best regards,
Joerg v. Lingen - Interlocking Coordinator
