Subject: infrastructure v094_12 - suggestion
Posted by Matthias Hengartner on Thu, 23 Oct 2003 19:17:38 GMT

Hello again,

here's a new suggestion for the visualisation part of the infrastructure schema.

The changes are:
(1) Several visualisations allowed for one infrastructure
(2) Start- and endpoint of a track omitted, attribute "elemID" of <lineElement> is not longer required.

To (1): This idea was brought up during the discussion in Dresden

To (2): Some visualisations (e.g. OpenTrack's) have the possibility to draw nodes in a railway network without a meaning in real, but only for visual purposes. I suggest that such an "empty" track element can be represented with a <lineElement> by omitting the "elemID"-attribute. Start- and endpoint can also be generalised and replaced by such an empty <lineElement>.

This is only a first approach and has to be discussed!

Kind regards
Matthias Hengartner
