Hi all,

in a recent discussion we came across a very similar question regarding how to specify the mainDirection of a track. We also came to the conclusion that the specified mainDirection would need to be determined in relation to the first of the specified associatedNetElements and then continued over the following associatedNetElements independent of the orientation of the those following netElements.

Would that also have been your conclusion when specifying a mainDirection of a track that spans over multiple netElements?

Best regards, Milan
