Dear Susanne and Christian,

> As agreed at the meeting in Zurich we will implement a free string
> attribute in the XML Schema, but provide an additional XML file with
> pre-defined values for this attribute.

Despite of having suggested an enumeration here, I would accept Susannes
solution. Here, anything is better than a pure string. It is ok, as long
as the spelling of well-known registers is defined anywhere in RailML. In
this sense, an enumeration and a string with pre-defined values makes no
difference for me.

Please don't forget the other extreme already mentioned: The
/infrastructureManagerCode/. As long as nobody wants to enumerate (and
maintain!) all the known IMs (ThE, EVB, HzL,...): Please define it as a
string (possibly with some pre-defined values) before it is too late for
2.2.

Thanks,
Dirk.
