Hello,

in addition to the suggested timetable-schema 0.96 I'm planning some
renaming, documentating and reconstructing of the existing elements, to
get a more consistent Version for 1.00:

dynamics:

with some slightly changing and renaming will now look like this:

brakingSystem optional string
brakedWeightPercentage optional decimal
timeSurcharge optional decimal
loadSurcharge optional decimal
trainProtection optional string

Are there any suggestions or serious arguments against this change from
the users of this element?

Best regards from Zurich,
Joachim Rubröder
