Hello Claus,

I guess you're especially talking of the infrastructure schema, of which version 0.93 is the newest official version. Since last july, there were many releases and drafts for a version 0.94; some of them were posted in the newsgroup.

Ulrich Linder is currently working on a new release for version 0.94 which he intends to post in this newsgroup within this week. There will still be some points need to be discussed, but after that, we hope to have a "final candidate" for a version 1.0. Therefore, I recommend you to wait for this posting.

As regards the other schemes: As far as I know, the current version of the timetable schmea is 0.96, and the current version of the rollingstock is 0.93.

I guess that all the new schemes will be published on railml.org, as soon the new website will be online.

Best regards,
Matthias
