Hello Jess,

Welcome at the railML community. :-)

Sorry for the late response. I only sometimes have a look at the
timetable forum. I thought somebody would help out with more historic
railML implementation background than me.

jn@trapezegroup.eu (Jess Nielsen) writes:

Did you already asked at the software tool developers which defined the
export for railML files your tool consumes?

> I have been looking in the xsd for both version 2.1 and the

> the trainPart entity, but not on the sectionTT entity.

+1

Earlier versions (railML 1.0 and railML 1.1) had this attribute in the
<train> element.

> First, I am wondering whether it has been discussed to place the debitcode

> proposal?

No discussions I would be aware of.

Maybe it was sometimes mentioned at a railML conference. But then there
always comes the advice to post the issue to the appropriate forum in
order to broaden the discussion to users not attending the conference.

> Second, did the debitcode attribute ever exist on the sectionTT
> entity?

AFAIK not.

Do somebody has a need for the "debitcode" attribute at the <sectionTT>
element? Do you use this attribute or just pass it unchanged or drop it?

It should show up an XML validation error!

Kind regards...
Susanne
