
Subject: Proposal for new Element <category>

Dear Colleagues

I think it is time to restart our timetable scheme discussion. I just have a proposal for a new element.

What I miss is a function to group a number of trains independent of their technical specification.

My idea is to add an optional element <categories> under the <timetable> element. <categories> then hold a number of <category> elements. Every category has a number of attributes (e.g. categoryID, categoryName, categoryPriority, ...). I am sure there are many more candidates for useful attributes.

What do you think about such an extension to the scheme?

Best regards / Greetings from Switzerland

Dani
