
Subject: Need for clarification: <SpeedChange>@status

Dear all,

the infrastructure element <speedChange> has an attribute @status that is unclear in its usage due to missing documentation (see [1]).

Therefore, my question(s) to you:

Do you use <speedChange>@status in your current railML interfaces?

If yes, how do you use <speedChange>@status?

Your feedback is essential for evolving version railML 3.1 and thus highly appreciated...

[1] <https://wiki.railml.org/index.php?title=IS:speedChange>

Best regards
Christian

Dear Christian,

we don't use <speedChange>.status since railML >=2.2. We did use it before r2.2 as a (makeshift) replacement for the later @profileRef.

Dirk.
