
Subject: Using type EntityLref for references to the infrastructure domain

Dear all,

The EntityLref type is frequently used for elements that reference infrastructure elements, but the annotation for the type declares it to be a "base type for referring elements in IL". Either the annotation should be changed or another type used (maybe a common one).

Best regards,
Thomas Nygreen

Correct, I will adopt the annotation as the reference shall not be restricted in that way.

Best regards,
Joerg v. Lingen
