Dear all,

in the IL schema we have currently the possibility to mark a switch as type "interlacedSwitch" with relation to another switch because they both might have a dependency for interlocking operation. This particular type is currently not foreseen in IS at all. Do we need this type?

attached a photo of such interlaced switches (  
[https://de.wikipedia.org/wiki/Datei:Plektita\\_trakforke\\_14.jp](https://de.wikipedia.org/wiki/Datei:Plektita_trakforke_14.jp) eg)

it seems that there is no need for the "interlaced switch" at the moment. Thus, I recommend to skip this topic for railML 3.1.

Best regards  
Christian

switchType in IL plus the possible value "interlacedSwitch" is deleted

Regards,

Jörg von Lingen - Interlocking Coordinator
